# INTRODUCTION

Token known as Pab Finance product offering will continuously be expanded and upgraded based on the input we receive from our users and our own extensive market analysis. BEP20 is a block chain based decentralized platform that aims to build a free, global digital content Entertainment system with distributed Blockchain Technology, and allows easy and Cost-effective sharing of digital content. This create secure lending environment where the lender receive a high yield interest rate annually (Apy) paid of staking Coin.

It Is A Utility Token. Additional Burns And Reward Systems, Such As Yield Farming/Staking, Airdrops, And NFT Drops, Are Being Considered And Will Be Implemented Into The Tokenomics Of Pab Finance token. Career Trading Coin Verson.2 Coin Network Plans On Becoming A Block chain Enterprise Specifically Designed For Global Payments.

This Standard is **Pab Finance**, the Trustless data layer

# ABSTRACT

**Prime Bunny** (PAB) is a BEP20 blockchain-based token with an initial total supply of **10,000,000,000 PAB** and 18-digit precision. Our platform is continuously evolving, integrating user feedback and in-depth market analysis to enhance and expand our product offerings.

BEP20 serves as a decentralized ecosystem designed to revolutionize digital content distribution within the entertainment industry. By leveraging blockchain technology, it enables seamless, cost-effective sharing of digital content on a global scale.

Additionally, Prime Bunny (PAB) creates a secure lending environment where lenders can stake their tokens and earn a high-yield annual percentage yield (APY), ensuring a rewarding and sustainable financial ecosystem.

# PRIME SCAN

**The Explorer for the Prime Bunny Ecosystem.**

Prime Scan is an integral part of the Prime Bunny (PAB) ecosystem, built on the Prime blockchain. Prime is a decentralized platform leveraging blockchain technology to empower developers in creating decentralized applications (dApps). The native cryptocurrency of this ecosystem is Prime Bunny (PAB).

Prime Scan functions as a block explorer and analytics tool for the Prime blockchain, enabling users to track and analyze transactions, monitor account balances, transaction history, and gain insights into various metrics related to the Prime network.

# DECENTRALIZED / PERMISSIONLESS

Onboarding onto Prime Bunny (PAB) will become progressively permissionless over time. Initially, Prime will support a fixed set of networks, with this registry being ITO-controlled as a temporary safeguard. This measure is in place to prevent low-value network integrations that could add unnecessary monitoring overhead. In the future, the Prime network will not require ITO network registration. Any network wishing to integrate with Prime Bunny (PAB) will only need an entity willing to bridge messages between networks and deploy a smart contract capable of parsing and verifying Prime Bunny proofs.

## Prime Bunny

A one-size-fits-all approach doesn't work when it comes to data provision and quality. With Prime Bunny (PAB), users can deploy programs to fetch and aggregate data from various sources in customizable ways based on their specific product needs.

# Performance and Demand Assessment

The performance of public blockchains is typically measured in TPS (Transactions Per Second). The Prime Main-Chain achieves an average TPS of over 7,500+, while the Prime Bunny Chain exceeds 80,000+ TPS, depending on hardware performance. This high throughput allows Prime Bunny (PAB) to efficiently handle large-scale financial applications, surpassing other public blockchains in concurrent transaction processing. Currently, the TPS values (in thousands) provided by various public chains are often theoretical peaks calculated under ideal conditions to establish a competitive edge over networks like BNB. However, when nodes are deployed on a large scale, the actual real-world TPS significantly declines due to.

$$TPS = \frac{GasLimit}{GasUsedPerTx} \div AverageBlockTime$$

With its high-speed architecture, Prime Bunny (PAB) is designed to redefine decentralized finance (DeFi) and large-scale applications by delivering exceptional efficiency, scalability, and reliability.

## TOKENOMICS

Tokenomics, also known as token economics, is an emerging field concerned with the economic properties of agent-driven systems that use cryptographic tokens that are typically created and managed on blockchain-based distributed ledgers.

# TOKEN DISTRIBUTION

The **Prime Bunny (PAB)** Token is designed for a decentralized, scalable, and high-performance blockchain ecosystem. The total supply of 10,000,000,000 PAB is strategically allocated to ensure long-term sustainability and ecosystem growth.

- 45% Staking Supply
